

Bhushan Soni

Senior Observability Consultant | Dynatrace & AppDynamics | Automation, Migration & SRE

Dynatrace SaaS | Grail | DQL | OneAgent | ActiveGate | Davis AI | AppDynamics | REST APIs | Python | PowerShell

Toronto, ON, Canada | 647-242-9456 | sonibh26@gmail.com | Canadian Citizen

PROFESSIONAL SUMMARY

Senior observability consultant and Dynatrace platform engineer with 15+ years of enterprise IT experience across APM, site reliability engineering, production support, monitoring modernization and observability automation. Owns the full observability lifecycle from architecture, discovery, OneAgent/ActiveGate deployment and telemetry engineering through alerting, SLOs, operationalization, migration and L2/L3 support. Builds API- and script-driven automation around Dynatrace and AppDynamics to inventory environments, extract and normalize configuration, reconstruct topology, assess governance gaps, support migrations and generate evidence-based reports. Hands-on with Dynatrace SaaS, Grail, DQL, Davis AI, logs, traces, metrics, OpenTelemetry, Workflows, ServiceNow, Oracle/SQL, Kafka/JMX, Python, PowerShell and REST APIs.

CORE OBSERVABILITY & AUTOMATION EXPERTISE

Dynatrace Platform	SaaS/Grail, tenant strategy, OneAgent, ActiveGate, network zones, RBAC, management zones, service/process detection, Extensions 2.0
Telemetry & Reliability	DQL, logs, distributed traces, metrics, OpenTelemetry, SLO/SLI, Davis AI, topology-aware alerting, noise reduction, RCA
Automation & APIs	Python, PowerShell, REST APIs, Settings API, entity APIs, Git/GitHub, configuration extraction, validation, bulk review, evidence reporting
AppDynamics & Migration	Controller/application inventory, business transactions, health rules, dashboards, analytics, agent inventory, configuration extraction and migration assessment

SELECTED PLATFORM OUTCOMES

- Reduced mean time to resolution by approximately 40% through stronger telemetry correlation, production triage, Davis AI-assisted investigation and ITSM workflow optimization.
- Reduced alert noise by approximately 60% through threshold tuning, entity scoping, health-rule rationalization, ownership alignment and actionable alert design.
- Onboarded 100+ enterprise applications and supported 50+ operational dashboards and 100+ alerts/health rules across applications, infrastructure and databases.
- Built API- and script-based tooling to inventory, validate and migrate hundreds of observability configurations, improving repeatability, governance and auditability.

PROFESSIONAL EXPERIENCE

Founder & Principal Observability Consultant | TechTurn IT Services Inc. (Interac, CDW) Jun 2018 - Present

- Lead Dynatrace platform engineering, observability modernization and migration programs for enterprise and financial-services clients from discovery and architecture through implementation, operationalization and production support.
- Design Dynatrace SaaS/Grail architectures covering OneAgent/ActiveGate deployment, network zones, routing, certificates, RBAC, management zones, tagging, scalability and supportability.
- Automate platform inventory, extraction, migration and validation using Python, PowerShell, REST APIs and Git-based workflows, including read-only discovery and bulk settings analysis across hundreds of monitoring objects.
- Engineer DQL/Grail analytics, custom metrics, OpenPipeline/Extensions 2.0 patterns, Oracle SQL monitoring, Kafka/JMX observability, business-service views and topology-aware dashboards.
- Develop Davis AI/Workflow and ServiceNow routing strategies that reduce alert noise and route only actionable incidents to accountable support teams.

Senior Observability Consultant / Site Reliability Engineer | Canada Life May 2021 - Jun 2025

- Implemented and operated Dynatrace and AppDynamics observability across enterprise applications, infrastructure, services, databases, Synthetic Monitoring and Real User Monitoring in a regulated environment.
- Supported standards for agent deployment, service/process detection, management-zone access, tagging, alerting, dashboards, integrations and operational governance.
- Built SLO/SLI and service-health monitoring for availability, response time, failure rate, throughput and business transaction health; tuned alerts to reduce false positives and operational noise.
- Integrated Dynatrace problem detection and incident workflows with ServiceNow/PagerDuty and used distributed traces and topology context for root-cause analysis.

Senior AppDynamics Consultant | Cisco Professional Services Jun 2019 - May 2021

- Onboarded 100+ enterprise applications and designed agent deployment and monitoring patterns using Application, Machine, Database, Analytics and End User Monitoring agents.
- Delivered AppDynamics consulting for large enterprise and financial clients covering architecture, instrumentation, business transaction analysis, alerting, dashboards, troubleshooting and operational adoption.
- Trained 200+ engineers, developers and operations users on APM, distributed transaction analysis, monitoring standards and production troubleshooting.

Senior Consultant / Application Support Analyst | HOOPP Jun 2018 - Sep 2019

- Provided 24x7 production support, major-incident management, root-cause analysis and operational-readiness support; built Splunk operational views and improved monitoring visibility.

Senior Software Engineer | Scotiabank / Tech Mahindra Nov 2015 - Jun 2018

SELECTED OBSERVABILITY AUTOMATION PLATFORMS

Dynatrace Environment Intelligence Platform | TechTurn IT Services Inc.

2026

- Designed and developed a read-only Dynatrace discovery and assessment platform that automates environment inventory, entity classification, topology mapping, governance analysis and reporting.
- Built API-driven discovery for hosts, process groups, services, service instances, tags, properties, management zones, ownership metadata and entity relationships.
- Created a normalized hierarchy connecting Environment → Application/Workload → Business Service → Service Offering → Runtime Entities, with classification evidence and relationship traceability.
- Automated identification of missing ownership, application/environment classification, criticality and tagging gaps; generated inventory, remediation, evidence and interactive Environment Layer reports.
- Public showcase: <https://sonibh2686.github.io/techtturn-dynatrace-environment-intelligence/>

AppDynamics Configuration & Migration Automation Platform | TechTurn IT Services Inc.

2026

- Designed and developed an AppDynamics configuration discovery and migration platform to replace manual controller-by-controller assessment with repeatable API-driven extraction and inventory.
- Automated extraction and structured review of application/controller configuration, agent inventory, business transactions, dashboards, analytics searches and monitoring objects.
- Implemented reusable configuration adapters, selective extraction, validation, session-based inventory, evidence capture and export workflows for migration and audit use cases.
- Built migration-oriented tooling to compare source configuration, preserve evidence and support controlled translation of AppDynamics monitoring use cases into target observability platforms.
- GitHub: <https://github.com/sonibh2686/appdynamics-migration-assessment>

SELECTED DYNATRACE & MIGRATION DELIVERIES

- AppDynamics-to-Dynatrace modernization: assessed health rules, dashboards, infrastructure, databases, JMX metrics and service monitoring; defined target-state mapping, migration priorities and production rollout controls.
- Dynatrace configuration automation: built PowerShell/Python tooling for Settings API export, ownership filtering, backups, dry-run validation, controlled updates and evidence reporting across hundreds of anomaly-detector and platform objects.
- Database observability: designed Oracle Extensions 2.0 custom SQL metrics for active sessions, waits, load, inactive sessions and deadlocks; created DQL-based availability and performance alerting aligned to legacy controls.
- Service and host intelligence: developed DQL and custom metric views for throughput, failures, response time, host attribution, process groups, service instances, JVM health and operational analysis.
- Operational governance: standardized tagging, environment/ownership dimensions, management zones, alert naming, runbook alignment, service links, maintenance handling and actionable dashboards.
- ServiceNow automation: designed workflow-based incident routing so only actionable, correctly owned problems create ITSM incidents while informational/noisy conditions remain dashboard-visible or are tuned/suppressed.

TECHNICAL ENVIRONMENT

Dynatrace SaaS, Grail, DQL, OneAgent, ActiveGate, Davis AI, Logs, Distributed Tracing, Metrics, Business Events, Workflows, OpenPipeline, Extensions 2.0, SLO/SLI, OpenTelemetry, AppDynamics, ServiceNow, PagerDuty, Splunk, Datadog, Oracle, SQL Server, Azure SQL, Kafka, JMX, Linux, Windows, Python, PowerShell, SQL, REST APIs, GitHub and GitLab.

CERTIFICATIONS & EDUCATION

Certifications: Dynatrace Associate (Aug 2026) | AppDynamics Certified Implementation Professional | AppDynamics Certified Performance Analyst | AppDynamics Administrator | Datadog Fundamentals | New Relic Verified Foundation

Education: M.C.A. - Master of Computer Applications, Pune University | B.C.A. - Bachelor of Computer Applications, Nanded University
